Introduction to Cognitive Science (Fall 2016)

(All Intro to CogSci lectures will be presented in live 3D, but only some will require special viewing glasses!)

What, When, & Where

Course #s: Cognitive Science 110a, Psychology 130a
When: Fall 2016, Mondays & Wednesdays, 2:30 - 3:45 pm
Where: Yale Art Gallery Auditorium (Entrance on High Street just north of Chapel Street)
Webpage: http://perception.yale.edu/IntroCogSci/

Once you’ve ‘joined’ the course in classesv2, this link will redirect to our homepage, after you log in via CAS.

Instructor Info

Professor: Brian Scholl (Professor, Department of Psychology and Cognitive Science Program)
Office: SSS 304 (at the corner of College/Prospect Streets & Grove Street)
Email: brian.scholl@yale.edu
Web: http://perception.yale.edu/
Phone: 432-4629 (but email is strongly preferred, and I often forget that I even have voicemail)
Office Hours: Thursdays 4:30 - 5:30 pm, just after many classes, or by appointment

Teaching Fellows

Note: This list may change as the semester begins. Check the class webpage for up-to-date information!

Dorsa Amir: dorsa.amir@yale.edu (Reproductive Ecology Lab) OHs = Tue 2 pm [21 Sachem, 232]
Clara Colombatto: clara.colombatto@yale.edu (Human Neuroscience Lab) OHs = Tue 12 pm [SSS 309B]
Anton Gollwitzer: anton.gollwitzer@yale.edu (Automaticity Lab) OHs = Thu 12 pm [Kirtland 101D]
Ashley Jordan: ashley.jordan@yale.edu (Infant Cognition Center) OHs = Mon 4 pm [SSS 210E]
Julia Marshall: julia.marshall@yale.edu (Mind & Development Lab) OHs = Wed 10 am [SSS 8]
Hannah Weinberg-Wolf: hannah.weinberg-wolf@yale.edu (Social Neuroscience Lab) OHs = Mon 1 pm [Dunham 101]
Course Description

Welcome! The goal of cognitive science — and of this course — is to understand how the mind works. Trying to understand our own minds is perhaps the most ambitious and exciting (and difficult) project in all of science, and this project requires tools drawn from fields including experimental psychology, computer science, linguistics, vision science, philosophy, anthropology, behavioral economics, and several varieties of neuroscience (among others). This course will introduce you to the major tools and theories from these areas, as they relate to the study of the mind. We will employ these perspectives while exploring the nature of mental processes such as perception, reasoning, memory, attention, imagery, language, intelligence, decision-making, morality — and even love and attraction. In sum, this course will expose you to cognitive science, the assumptions on which it rests, and the most important results obtained so far. By the end of the course, you should have gained important new insights into what you are and how you work!

Expected Work and Grading

1. (20%) Questions on Daily Readings
   To get the most out of this course, it is essential that you carefully and critically study the readings associated with each lecture. To encourage this — and to give the instructor feedback as to what you thought of the material — you will be asked to respond to a brief question concerning most readings. A sample (if boring) question might be: “Which of the two theories discussed in this article do you think is right, and why?” Your answers to each question — which you must email to your specified TF no later than one hour before the start of the class wherein that reading will be discussed — need be no longer than 1 or 2 paragraphs, and should take no longer than 15 minutes to write after you have read the material. The questions due for each class will be assigned at the end of the previous class. I will use these comments to gauge your reactions to (and understanding of) the ideas we’ll discuss, and I will occasionally spend the first part of the following class responding to some of the issues you raise in these comments. Note that a significant portion of your grade (20%) will be based on these questions, and that late submissions will not be accepted for any reason.

2. (60%) Two Exams
   60% of your course grade will be determined by two exams. The first exam will be on Monday, October 17th, and will cover material from August 31st through October 12th. The second exam will be on Wednesday, December 7th (aka our last class meeting), and will cover material from October 24th through December 5th. The exam on which you do the best will count for 35% of your grade; the other will count for 25%. There will be no exam during the final exam period. The nature of these exams will be described more fully in class. Make-up exams will be given only in exceptional circumstances, and in all cases may involve completely new questions, possibly in other formats. (Advice: you really want to avoid having to take a make-up exam.) To do well on these exams, you’ll have to attend the lectures — especially since our readings and lectures will rarely overlap by more than ~25% (since just rehearsing the readings during our class time wouldn’t be very fun).

3. (20%) Short Paper
   You will be required to write one short (7 - 8 page) paper for this course, on an assigned topic that is discussed near the end of this syllabus. This paper is due no later than one hour before class on Wednesday, November 16th (aka our last class before the break).
Readings
I have a low opinion of all extant introductory cognitive science textbooks. But even if there was a good one, I probably still wouldn't like it — since textbooks have always struck me as intrinsically unexciting and watered-down ways to discover a new field. As a result, the readings for this course have been drawn from many different sources, including textbook excerpts, selections from popular books, articles from popular-press venues such as the New Yorker, and many articles from the primary scientific literature (plus the occasional OK Go music video). All of the readings will be posted on our class webpage, for you to view or print as you wish. (There is nothing to buy!) Using readings from the primary literature will help us to capture the vitality and excitement of scientific discovery. (This includes work that hasn’t yet filtered into textbooks, including readings that haven’t even been published yet!) These readings will also be challenging, though: they will use terms and refer to ideas with which you are unfamiliar, and they’ll sometimes leave you with more questions than answers. This is okay! Though the readings have been carefully chosen to be accessible, I don’t expect you to fully understand every aspect of them, and I will frequently provide guidance about what you should try to get out of especially challenging readings. In the end, these challenges will pay off, as you get a direct look at the science of mind in the making.

Preliminary Course Outline
Here’s a preliminary outline of the material that we’ll cover in this course. The full references for these readings are listed at the very end of the syllabus. We’ll start out by spending a few weeks on the major assumptions and themes of cognitive science as a whole, after which we’ll branch out to a representative selection of the various tools cognitive scientists use, and the aspects of the mind that we study. The exact timing of these lectures (and the exact readings that we end up using) are subject to change. We may end up spending more time than is listed here on topics that strike you as especially interesting or difficult. Please interact with me regarding the course: If there are topics you would like to add, or cover in more depth, let me know!

Wed 8/31: An Introduction to Your Mind
[No Readings]

Fri 9/2: Foundations of Cognitive Science
Bisson (1991), “They’re Made Out of Meat” (Omni)
Marcus et al. (2014), “How to Study the Brain” (Chronicle of Higher Education)

Mon 9/5: No Class: Labor Day

Wed 9/7: Crossed Wires (The Architecture of the Mind)
Rafal (2001), “ Bálint’s Syndrome”
Sacks (2004), “Speed” (New Yorker)

Mon 9/12: What’s Within? (How Nature Supports Nurture)
Bouchard (2008), selection from “Genes and Human Psychological Traits”
Sugita (2008), “Face Perception in Monkeys Reared With No Exposure to Faces”

Wed 9/14: Pieces of Mind (Modularity and ‘Mental Organs’)
Gallistel (2000), selection from “The Replacement of General-Purpose Learning Models with Adaptively Specialized Learning Modules”

Mon 9/19: Mental Circuitry (Computation and Cognitive Science)
Pinker (1997), selection from “Standard Equipment”
Pyllyshyn (1999), “What’s In Your Mind?”
Watch this strange movie: http://www.youtube.com/watch?v=E3keLeMwfHY
Wed 9/21: Two Mysteries of the Mind (Evolution and Consciousness)
Churchland (2013), chapter 2 of Matter and Consciousness (3rd Ed.)

Mon 9/26: I, Robot (AI & and Social Robotics) [Guest Lecture: Scaz]
Scassellati et al. (2012), “Robots for use in autism research”

Wed 9/28: Goo goo, ga ga (The Minds of Babies)
Topál et al. (2008), “Infants’ Perseverative Search Errors are Induced by Pragmatic Misinterpretation”
Talbot (2006), “The Baby Lab” (New Yorker)

Mon 10/3: Monkeying Around (Comparative Cognition) [Guest Lecture: Laurie Santos]
Tomasello et al. (2003), “Chimpanzees Understand Psychological States…”
Hare & Tomasello (2005), “Human-like Social Skills in Dogs?”

Wed 10/5: My Brain Made Me Do It (Cognitive Neuroscience)
Nishimoto et al. (2011), “Reconstructing Visual Experiences from Brain Activity Evoked by Natural Movies”

Mon 10/10: Brain Scanning and Mind Reading
Hasson et al. (2004), “Intersubject Synchronization of Cortical Activity During Natural Vision”
Iacobini and various unhappy people (2007), “This is Your Brain on Politics” (NYTimes)
Optional: Jonas & Kording (2016), “Could a Neuroscientist Understand a Microprocessor?”

Wed 10/12: “Goo goo, ga ga” (Acquiring Language)
Jackendoff (1994), Chapters 8 - 10 of Patterns in the Mind
Enard et al. (2002), “Molecular Evolution of FOXP2, a Gene Involved in Speech and Language”

Mon 10/17: MIDTERM EXAMINATION! <—
(Wed 10/19: No Class: October Recess)

Mon 10/24: Now Hear This! (Linguistics)
Everaert et al. (2015), “Structures, not Strings: Linguistics as a Part of the Cognitive Sciences”
Optional gentler introduction: Pinker (1994), chapters 4 - 5 of The Language Instinct

Wed 10/26: Colorless Green Ideas Sleep Furiously (Syntactic Theory)
Stillings et al. (1995), “Syntax” and “Universals”

Mon 10/31: Seeing: It’s Not What You Think (Perception)

Wed 11/2: She Blinded Me With Science (Visual Cognition)
New & Scholl (2008), “Perceptual Scotomas: A Functional Account of Motion-Induced Blindness”
Watch this music video: https://www.youtube.com/watch?v=m86ae_e_ptU
Mon 11/7: Bringing Cognitive Science into Focus (Attention)
Most et al. (2001), “How Not to Be Seen”

Wed 11/9: Deep Thought (Roles of Philosophy in CogSci) [Guest Lecture: Josh Knobe]
[Readings TBA]

Mon 11/14: Just Minds (The Cognitive Science of Morality)

Wed 11/16: Elementary, My Dear Watson (Reasoning and Rationality) <PAPERS DUE!>
Ariely (2010), “Thoughts about the Subprime Mortgage Crisis and its Consequences”

(Mon 11/21 & Wed 11/23: No Class: November Recess)
http://tofurky.com/faqs/

Wed 11/30: Ooh la la! (The CogSci of Love, Sex, & Attraction)

Mon 12/5: The Past, Present, and Future of Cognitive Science
[Readings TBA]

Wed 12/7: FINAL EXAMINATION!

In this short (7-8 page) thought paper, you’ll choose a part of cognitive science that we’ve covered in class, and you’ll discuss how the research in that area should (or should not!) impact the real world, and everyday life. In essence, you’ll be asking: Who cares? Why should (or shouldn’t) the ‘person on the street’ care about this research? This will be a ‘thought paper’ in part because our readings and lectures will not always discuss these themes explicitly, but I hope that you’ll be thinking about them throughout our course. This topic and our expectations for the paper will be described in much more detail when the due date approaches.

Note also that although this is the ‘assigned topic’ for the paper, I am open to letting you write on another topic of your own choosing, if you are particularly engaged by some other idea. The only strict constraint is that this must be a ‘thought paper’, to be graded primarily on the degree of interesting and careful thought it conveys involving themes from cognitive science. (In contrast, this paper is not meant to be a research paper or a ‘book report’, in which you summarize others’ already-published ideas. Indeed, you needn’t read any new source material at all for this assignment, beyond what is already required for class!) To write on an independent topic, you must get it approved by me, no later than Wednesday, November 9th (aka a week before the paper is due).
